## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim1 is rejected under 35 U.S.C. 103(a) as being unpatentable over APA in view of Chitayat (6215206).

APA substantially teaches the claim invention except that it does not show a rotor having a first to third shaft wherein, a second permanent magnet part have a plurality of permanent magnets assembled on an outer circumferential surface of the third shaft, wherein the N pole, S pole of the second permanent magnet are arranged on an outer circumferential surface of the third shaft in the vertical direction in a rotation movement zone.

Chitayat discloses a rotary-linear actuator in fig1b-6a comprising a first to third shaft (26), having a plurality of permanents (25a 25b) assembled on an outer circumferential surface of the third shaft, wherein the N pole and S pole of the second permanent are arrange on an outer circumferential surface of the third shaft in the vertical direction in a rotation movement for the purpose of producing a motive force causing the first and second member to move relative to each other. Therefore, it would have been obvious

Art Unit: 2834

to one having ordinary skill in the art at the time the invention was made to modify the linear motor of APA with the permanent magnet configuration of Chitayat for the purpose of allowing the first and second members to move continuously in a rotational and linear modes.
